December 11, 2024

A virtual summit devoted to the advancement of event-driven architecture in business.
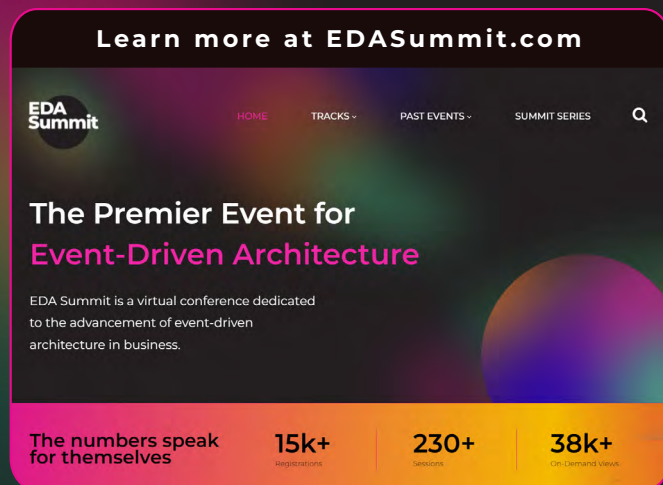

Organized by **solace.**

What is EDA Summit?

EDA Summit is the first conference dedicated to helping organizations understand and implement event-driven architecture.

As the pace of change continues to accelerate and our world becomes more digital, it can also become more siloed, fragmented and fragile. Event-driven architecture promises better customer experiences, more efficient operations, and greater agility so organizations can thrive.

EDA Summit attracts business leaders, architects and technologists who want to learn about and implement event-driven architecture.

This year's conference will feature 30+ sessions organized into three tracks:

- **EDA in Action**
  Experience the power of EDA first-hand through real-world success stories.

- **Redefining Integration with EDA**
  Learn why event-driven integration is the key to connecting everything as quickly as today's fast-paced environment demands.

- **The Power of AI + EDA**
  Explore how AI is amplifying the power of events, and why EDA is the backbone of AI success
